

The next security threat is just around the corner.

## What is your Confidence Level?

Information security refers to the state of protection of an organisation's information resources. This state, also called "confidence level", is based upon the set of security measures adopted by your business to protect its key driver -- 'information'.

### HOW WELL PROTECTED IS YOUR BUSINESS?

- ▶ Are you aware of the internal and external threats to your critical business information systems?
- ▶ Do you believe that your information assets are adequately protected?
- ▶ Do you have clearly defined processes and procedures to resume business quickly after an outage?
- ▶ Do you see a nagging gap between information security policies and the enforcement levels?
- ▶ Can your existing security measures protect against the over 6,000 technology based vulnerabilities in play right now? (Over 90% of these vulnerabilities can be exploited remotely.)
- ▶ Did you know that 73% data breaches result from external sources; 18% are caused by insiders, 39% implicate business partners and 30% involve multiple parties?
- ▶ And did you know that 62% data breaches occur due to significant error; 59% from hacking and intrusions; 31% from malicious code; 22% due to exploited vulnerabilities and 15% due to good old physical threats.

**By appropriately securing IT infrastructure and assets, you can:**

- **Reduce the likelihood of a business interruption from a security-related event**
- **Limit the impact of unanticipated events**
- **Demonstrate compliance with regulatory and business requirements**

# SECURESYNERGY

The Information Assurance Company

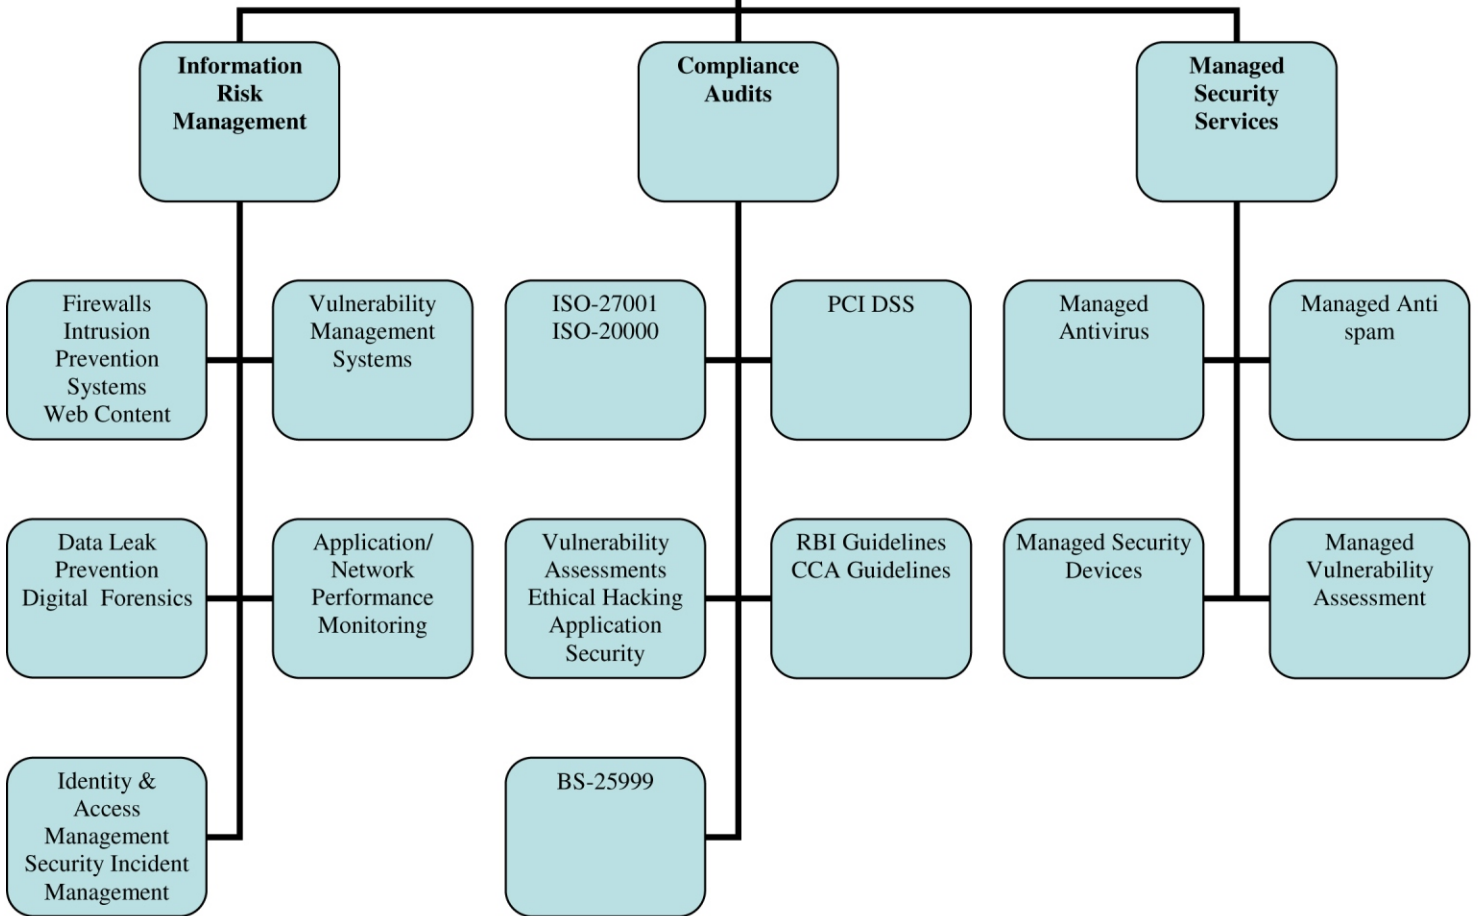

ISO27001 CERTIFIED

**SecureSynergy's security solutions can help you to:**

- More effectively respond to emerging threats
- Assess your current security posture and identify vulnerabilities
- Address security vulnerabilities before they are exploited
- Achieve compliance with Industry and government regulations
- Improve internal security with more effective user access management
- Protect data assets on the network as well as on mobile devices
- Proactively monitor and block attacks from known and new sources

**SecureSynergy  
Solutions &  
Services  
Portfolio**

SecureSynergy works with leading solution providers in the information security industry such as McAfee, Netscout to offer interoperable technology solutions to our customers. SecureSynergy maintains a wide variety of process and technology expertise spread across systems, applications and networking domains to design, implement, audit and maintain enterprise wide security compliant infrastructures for their clients. Our recent large customer wins include a nation wide deployment, and ongoing monitoring of perimeter security devices for the biggest information technology establishment under government of India and an enterprise wide ethical hacking and security governance project for a leading telecom giant.

SecureSynergy is a specialist technology consulting and services company, offering a unique mix of information risk management solutions, compliance audits and managed security services to all industry verticals including banking, financial, telecom, information technology, government, defence and pharma. We employ best-practice project management methodologies, the most advanced tools in the field of information security and best-of-breed supporting technologies to deliver high-value service at a competitive price. With a presence across India & Middle East, SecureSynergy serves several top-notch companies helping them in managing contagious and independent threats on their heterogeneous systems, networks and applications. We assist organisations in protecting their business critical information assets through a holistic approach integrating enterprise wide security activities.
