

Intrusion Prevention – Proactive Security Measures

Technology Workshop

The threat is real. Organisations today are facing attacks from fast spreading worms & viruses, to web defacements and denial of service attacks, with the challenge of vulnerability and patch management all becoming critical issues.

With Entercept® and IntruShield®, McAfee Security is uniquely positioned to provide a solution today to block both known, unknown and DoS attacks in real-time.

Agenda: 9.45am registration
10.00 AM - 1.00 PM presentation
Followed by Lunch

Venue: Taj Lands End, Bandra (W), Mumbai

Date: 14th November, 2003

By attending this free technology workshop you will learn how organisations can go beyond merely detecting threats to preventing them altogether:

- Advantages of IPS over legacy IDS
- IPS deployment methods
- Setting IPS policy to stop attacks in real time
- The benefits of Virtual IDS / IPS
- How to protect against Denial of Service
- Proactive Database & Web Server protection
- Intelligent Forensic Analysis & Custom Reporting

The workshop includes a demonstration of McAfee Security Network & Host Intrusion Prevention solutions.
